Chicago, IL · (773) 739-0145 · dharanirnk@gmail.com · LinkedIn · GitHub · Portfolio · Credly

EDUCATION

MS in Data Science - DePaul University, Chicago, IL Sept 2024 - June 2026
Concentration: Healthcare Analytics · GPA: 3.6

B.Tech in Computer Science Engineering - Malla Reddy Engineering College, India Nov 2020 - June 2024
Major: Computer Science, Minor: Data Science

PROFESSIONAL EXPERIENCE

Data Analytics Extern Apr 2026 - Jun 2026
TruBridge (via Extern)

- Analyzed 50,057 hospital admissions and found that medium-term stays (11-30 days) dominate bed capacity while departmental routing creates highly variable resource consumption (Chi-Square $p < 0.001$), turning raw admission data into actionable capacity-planning insights.
- Executed full analytics workflow in Python (Google Colab): data collection, cleaning, feature engineering (Min-Max scaling, log transforms), EDA, and statistical visualization; built a Power BI dashboard for non-technical stakeholders.
- Earned Top 10% Performer recognition; delivered final presentation with operational recommendations in a structured end-of-program review.

Marketing & Data Analyst Intern Jun 2025 - Sep 2025
Gabriel AI | Chicago, IL

- Automated LinkedIn competitive intelligence reporting in Python (Pandas) and Excel as part of a small cross-functional team, cutting ~8 hours/week of manual work and standardizing how the team tracked competitor activity.
- Built Tableau dashboards covering funnel performance, channel attribution, and growth KPIs; presented weekly insights to founders and GTM leads that contributed to a ~20% increase in inbound leads over the quarter.
- Ran ICP analysis in SQL and Google Sheets to segment and score prospects, recommending a shift toward the highest-performing segments to improve demo booking efficiency.

Data Science Intern Jun 2023 - Dec 2023
Innodatatics | Hyderabad, India

- Built and refactored Python ETL pipelines on client datasets under NDA, cutting end-to-end preprocessing runtime by ~42% through batched transformations and reusable cleaning functions.
- Used SQL for data extraction and cleaning; applied normalization, one-hot encoding, and feature engineering to improve ML model inputs, lifting classification accuracy from baseline by ~34.6%.

SKILLS

Programming & Query: Python (Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn), SQL, R

Visualization & BI: Tableau, Power BI, Excel (Pivot Tables, VLOOKUP, Advanced Formulas), Google Sheets, Jupyter

Analytics & Methods: EDA, Statistical Modeling, Hypothesis Testing, Regression, Classification, Feature Engineering, Model Evaluation (ROC-AUC, F1, RMSE), ETL Pipelines, SHAP, Fairness Analysis

Business & KPIs: KPI Dashboard Design, Funnel Analysis, Customer Segmentation, ICP Analysis, Growth Analytics, Requirements Gathering, Stakeholder Reporting, Data Storytelling

Certifications: IBM Data Science Professional · Stanford - Intro to Statistics · Coursera - Business Analysis & PM · NASBA - AI & Business Strategy · TruBridge Top 10% Performer

PROJECTS & RESEARCH

30-Day Readmission Prediction with Fairness-Aware Thresholds | 60K+ Records, Python, Scikit-learn

- Built a classification pipeline on 60,946 labeled hospital admissions (MIMIC-IV); engineered 355 features from diagnosis codes, demographics, and clinical variables with patient-level split to prevent data leakage.
- Benchmarked 12 models and selected Random Forest (AUC 0.6506, 74.2% recall) based on generalization analysis; used SHAP to identify top predictors (prior admissions, LOS, discharge location) for stakeholder communication.
- Ran demographic fairness audit and applied stratified thresholds by subgroup, reducing false negative rate disparity by 86% (48.2pp to 6.6pp) without retraining the model or sacrificing performance.

Cardio Cast: Multi-Dataset Predictive Analytics | DePaul University, Python, Scikit-learn, Tableau

- Benchmarked 5 algorithms (AdaBoost, XGBoost, Random Forest, Gradient Boosting, Logistic Regression) across 5 random states on 5,400+ combined records; AdaBoost reached 94.1% stroke accuracy and XGBoost reached 0.89 AUC-ROC, with age, hypertension, and glucose emerging as primary risk drivers via VIF-based multicollinearity checks and tree-based feature importance.

Food Wastage Prediction: WLS Regression | R, Statistical Modeling, Supply Chain

- Built a WLS regression model in R on 228 event records across 11 supply-chain variables ($R^2 = 0.76$); identified Number of Guests and Quantity of Food as strongest predictors ($p < 0.001$). Selected WLS over OLS after diagnosing heteroscedasticity via Breusch-Pagan testing; findings informed procurement sizing recommendations.
